devolo WiFi Repeater firmware update

This firmware update expands the user interface of the devolo WiFi Repeater by adding an intuitive installation wizard. This wizard will make it even easier for you in future to set up the devolo WiFi Repeater and connect it to your WiFi in the event of a reconfiguration. Customers who have already set up the devolo WiFi Repeater and do not want to change their WiFi installation are not required to install the update. Easy integration via the WPS button is still possible.

Installation steps:

1. Plug your devolo WiFi Repeater into an outlet and wait about 40 seconds until the LED activity indicator starts flashing green.
2. **If your devolo WiFi Repeater has already been configured:** Restore the factory default settings of your devolo WiFi Repeater by pressing the reset button on the bottom of the device (next to the LAN port) for 10 seconds.
3. Open the WiFi configuration menu of the terminal device (desktop or laptop computer) and connect to the "devolo WiFi Repeater" WiFi network.
4. Enter the address 10.0.10.254 in the address line of your web browser. Then the configuration interface of your devolo WiFi Repeater appears:

5. Use the "Select file" button on your terminal device now to select the downloaded firmware file "firmware_devolo_wifi_repeater_1_1_0.img" and confirm this with "Apply".
6. The software on your devolo WiFi Repeater is now updated. Please wait about 3 minutes until the update has been completed successfully. Never disconnect the device from the mains supply during the update process.
7. Now reconnect to the devolo WiFi Repeater (see step 3) and enter http://devolo.wifi into the address bar of your web browser. The installation wizard starts automatically. Please follow the instructions for incorporating the devolo WiFi Repeater into your WiFi network.
